EMPOWER YOUR NETWORK

With medium to large scale IP based CCTV systems there is a cumbersome demand to deliver a large number of video streams from cameras and encoders. This places strain on the IP network to sustain the delivery of multiple streams which could result in dropped connections and poor image quality.

To prevent this many systems try to limit the number of streams they have available in order to reduce demand, but now there is a better solution: FUSION-Streamcaster.

REDUCE BANDWIDTH

Installed at the core of your IP network, FUSION-Streamcaster is configured to connect only the minimum number of stream profiles it requires. As a result it is able to recast the streams multiple times to its clients (I.E. user workstations) using only a single stream for each profile from the camera or encoder.

IMPROVE PERFORMANCE

REDUCE COSTS

By incorporating Streamcaster into your CCTV system you will:

- 1) Reduce the bandwidth required for video streams.
- 2) Improve connection stability and image quality.
- 3) Reduce the implementation costs of your solution.
